DETAILED ACTION

Claims 1-36 are pending in the application.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1-14, 16-34 and 36 are rejected under 35 U.S.C. 102(b) as being anticipated by JOHNSTON et al. U.S. 5,874,574. JOHNSTON teaches the process of preparing epsilon polymorph 2,4,6,8,10,12-hexanitro-2,4,6,8,10,12-hexaazatetracyclo[5.5.0.0^{5,9}0^{3,11}]-dodecane (CL-20) as claimed herein where the CL-20 is substantially dry (anhydrous, i.e. less than about 1.5%, by weight water) and crystallizer containing a CL-20 non-solvent such as toluene.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over JOHNSTON et al. U.S. 5,874,574 in view of SANDERSON et al., U.S. 6,391,130. The process of crystallizing epsilon polymorph CL-20 is taught by U.S. '574 as described above in the anticipation rejection. U.S. '574 differs only in the preparation of CL-20

Art Unit: 1624

from TADA. The process of preparing CL-20 from TADA is taught by U.S. '130 in column 2, line 45. The process of preparing CL-20 from TADA of the instant invention is embraced by U.S. '130 and thus, one of ordinary skill in the art at the time the invention was made would have been motivated to prepare CL-20 from the process described in U.S. '130 and in so doing obtain the instant compounds via the process as claimed herein, in view of the equivalency teachings outlined above.
